PROFILE

Software Engineering graduate (Licence 3, ISI), I design and build web, desktop and AI-assisted solutions, from understanding the problem to a working product. I am also consolidating the mathematical foundations behind AI and Data (linear algebra) and starting to learn Python with that goal in mind. My teaching background gave me rigor, clear communication and autonomy. I am looking for a first role or freelance work in web development / automation, remote, with a gradual move toward AI and Data.

TECHNICAL SKILLS

Proficient : JavaScript, TypeScript, HTML, CSS, React, Tailwind CSS, Node.js, Express

Intermediate : PostgreSQL, Prisma ORM, PHP (Laravel), Electron, SQLite, REST APIs, JWT authentication

Basics : Angular, Vue.js, Flutter, Dart, algorithms, computer architecture

Currently learning : linear algebra (vectors and linear combinations covered; independence, subspaces, bases and dimensions in progress), Python, data & machine learning

PROFESSIONAL EXPERIENCE

Office Software Teacher (Intern) — EFPT

2025 – 2026

Sébikotane, Senegal

- Taught office software (Word, Excel, PowerPoint), computer fundamentals and an introduction to web development (HTML, CSS, JavaScript).
- Designed teaching materials and tracked students' progress.
- Built strong skills in explaining technical concepts clearly and adapting to different audiences, transferable to user support and technical documentation.

IT & Office Software Teacher — Complexe Bilingue Le Rocher

2023 – 2025

Sébikotane, Senegal

- Taught office software (Word, Excel, PowerPoint) and computer fundamentals.
- Designed teaching materials and tracked students' progress.
- Built strong skills in explaining technical concepts clearly and adapting to different audiences, transferable to user support and technical documentation.

PROJECTS

EduEval.AI

Full-stack web platform

Problem: Writing and grading assessments is slow, and requiring every student to create an account just to take one adds friction.

Solution: Built a platform where teachers create, publish and grade assessments, using React 19, Express 5, PostgreSQL and the Groq API (Llama 3.3), to auto-generate assessments with AI, automatically grade multiple-choice questions and AI-assist manual grading of open questions. Students join with a simple code, no account required.

Technologies: React 19, Vite, Tailwind CSS, shadcn/ui, Express 5, Prisma, PostgreSQL, JWT, Groq API

Havre de Paix Gestion

Windows desktop app, client project

Problem: A drinks depot ran its operations on an Excel file that had become fragile: duplicated table blocks, broken formulas, only one instalment allowed per customer debt.

Solution: Built a desktop app with a dashboard, stock management with threshold alerts, an expense journal and customer debts with multiple partial payments, using Electron, SQLite and exceljs, to replace the Excel file with a reliable offline tool. Automatic backups and Excel / PDF exports.

Technologies: Electron, SQLite (WASM), exceljs, Chart.js, JavaScript, electron-builder

Link: Private client project, no public repository

PharmaV2

Web application

Problem: Prescription-only medicines must never be ordered without a prescription, and stock and prices must stay reliable at checkout.

Solution: Built an online pharmacy app with a client space (catalogue, cart, checkout) and a role-protected manager space, using Laravel 12 and PostgreSQL, to re-validate stock and prices server-side at checkout and separate access by role middleware. Prescriptions are uploaded under randomized file names and stored privately.

Technologies: Laravel 12, PHP 8.2, Blade, Tailwind CSS, Alpine.js, PostgreSQL, Eloquent
